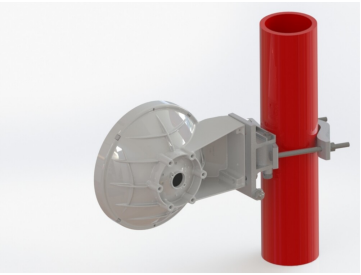
VHLP200-80/A

Base Product



0.2 m | 0.67 ft ValuLine® High Performance Low Profile Antenna, single-polarized, 71.000–86.000 GHz

Product Classification

Product Type	Microwave antenna
Product Brand	ValuLine®

General Specifications

Antenna Type	VHLP - ValuLine® High Performance Low Profile Antenna, single-polarized
Polarization	Single
Side Struts, Included	0
Side Struts, Optional	0

Dimensions

Diameter, nominal	0.2 m | 0.67 ft

Electrical Specifications

Operating Frequency Band	71.000 – 86.000 GHz
Gain, Low Band	42 dBi
Gain, Mid Band	43.5 dBi
Gain, Top Band	44 dBi
Boresite Cross Polarization Discrimination (XPD)	30 dB
Front-to-Back Ratio	61 dB
Beamwidth, Horizontal	1.1 °
Beamwidth, Vertical	1.1 °
Return Loss	14 dB
VSWR	1.5
Radiation Pattern Envelope Reference (RPE)	7447A
Electrical Compliance	ETSI 302 217 Class 3 | US FCC Part 101.115

VHLP200-80/A

Mechanical Specifications

Compatible Mounting Pipe Diameter	48 mm–120 mm | 1.9 in–4.7 in
Fine Azimuth Adjustment Range	±15°
Fine Elevation Adjustment Range	±15°
Wind Speed, operational	201 km/h | 124.896 mph
Wind Speed, survival	250 km/h | 155.343 mph

Antenna Dimensions and Mounting Information

Wind Forces at Wind Velocity Survival Rating

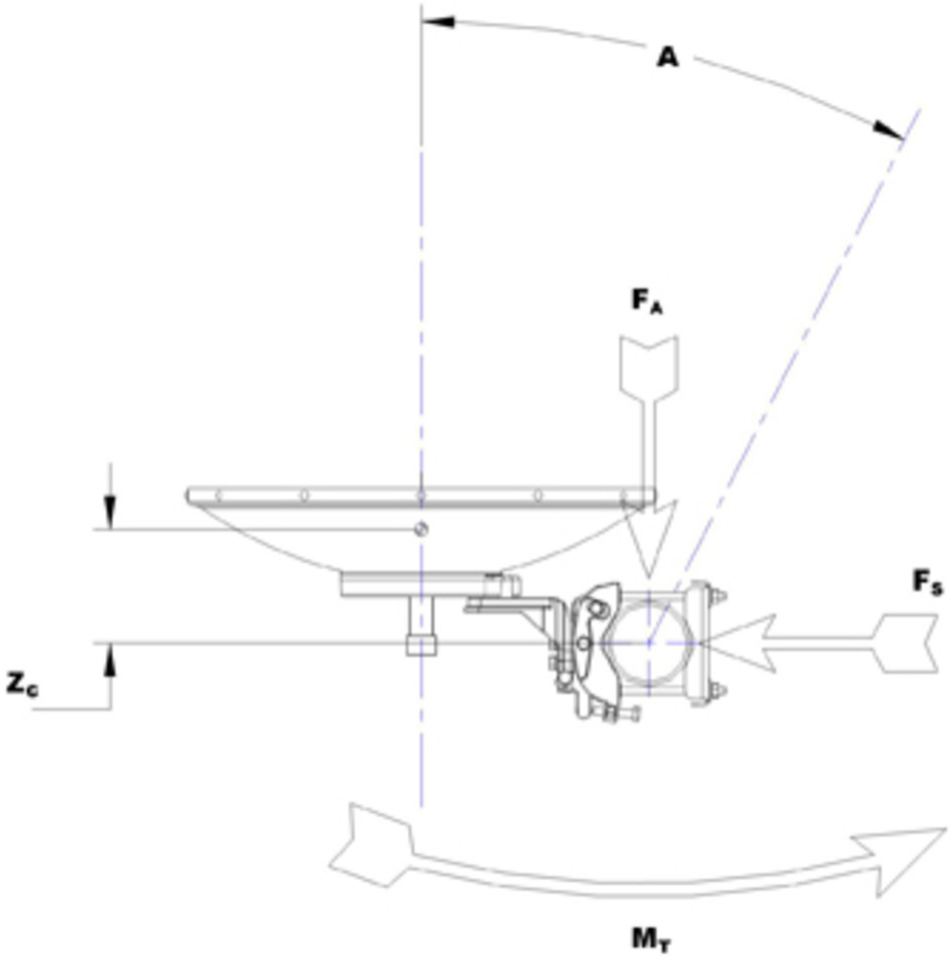
Axial Force (FA)	290 N | 65.195 lbf

VHLP200-80/A

Side Force (FS)	144 N | 32.372 lbf
Twisting Moment (MT)	86 N-m | 761.164 in lb
Zcg without Ice	11 mm | 0.433 in
Zcg with 1 in (25 mm) Radial Ice	18 mm | 0.709 in
Weight with 1 in (25 mm) Radial Ice	7 kg | 15.432 lb

VHLP200-80/A

Wind Forces at Wind Velocity Survival Rating Image



Packaging and Weights

Weight, net	5 kg | 11.023 lb

* Footnotes

Operating Frequency Band	Bands correspond with CCIR recommendations or common allocations used throughout the world. Other ranges can be accommodated on special order.
Gain, Mid Band	For a given frequency band, gain is primarily a function of antenna size. The gain of Andrew antennas is determined by either gain by comparison or by computer integration of the measured antenna patterns.
Boresite Cross Polarization Discrimination (XPD)	The difference between the peak of the co-polarized main beam and the maximum cross-polarized signal over an angle twice the 3 dB beamwidth

	of the co-polarized main beam.
Front-to-Back Ratio	Denotes highest radiation relative to the main beam, at 180° ±40°, across the band. Production antennas do not exceed rated values by more than 2 dB unless stated otherwise.
Return Loss	The figure that indicates the proportion of radio waves incident upon the antenna that are rejected as a ratio of those that are accepted.
VSWR	Maximum; is the guaranteed Peak Voltage-Standing-Wave-Ratio within the operating band.
Radiation Pattern Envelope Reference (RPE)	Radiation patterns define an antenna's ability to discriminate against unwanted signals. Under still dry conditions, production antennas will not have any peak exceeding the current RPE by more than 3dB, maintaining an angular accuracy of +/-1° throughout
Wind Speed, operational	For VHLP(X), SHP(X), HX and USX antennas, the wind speed where the maximum antenna deflection is 0.3 x the 3 dB beam width of the antenna. For other antennas, it is defined as a deflection is equal to or less than 0.1 degrees.
Wind Speed, survival	The maximum wind speed the antenna, including mounts and radomes, where applicable, will withstand without permanent deformation. Realignment may be required. This wind speed is applicable to antenna with the specified amount of radial ice.
Axial Force (FA)	Maximum forces exerted on a supporting structure as a result of wind from the most critical direction for this parameter. The individual maximums specified may not occur simultaneously. All forces are referenced to the mounting pipe.
Side Force (FS)	Maximum side force exerted on the mounting pipe as a result of wind from the most critical direction for this parameter. The individual maximums specified may not occur simultaneously. All forces are referenced to the mounting pipe.
Twisting Moment (MT)	Maximum forces exerted on a supporting structure as a result of wind from the most critical direction for this parameter. The individual maximums specified may not occur simultaneously. All forces are referenced to the mounting pipe.
